Renata S. Chikowski, Carla R.S. de Lira, Karl Henrik Larsson, Tatiana B. Gibertoni. A checklist of corticioid fungi (*Agaricomycetes, Basidiomycota*) from Brazil. 42 p.

Abstract—This study updates the available data about species of corticioid fungi from Brazil. We based our compilation on literature, herbarium revisions, and added information from recent field trips in the Atlantic Rain Forest, Amazonia, Caatinga, and Cerrado phytogeographic domains. Currently, there are 367 accepted species of corticioid fungi recorded in Brazil. Those representing new records include four for the Neotropics, 15 for the country, 18 for Northeast Brazil, and 41 for Brazilian phytogeographic domains.

Key words—diversity, *Hymenochaetales, Polyporales,* resupinate fungi, *Russulales*
